The heritage of innovation

Ewellix is a global innovator and manufacturer of linear motion and actuation solutions. Our state-of-the-art linear solutions are designed to increase machine performance, maximise uptime, reduce maintenance, improve safety and save energy. We engineer solutions for assembly automation, medical equipment, mobile machinery, distribution and a wide range of other industrial applications.

Technology leadership

We earned our reputation through decades of engineering excellence. Our journey began over 50 years ago as part of the SKF Group, a leading global technology provider. Our history provided us with the expertise to continuously develop new technologies and use them to create cutting edge products that offer our customers a competitive advantage.

In 2019, we became independent and changed our name to Ewellix. We are proud of our heritage. This gives us a unique foundation on which to build an agile business with engineering excellence and innovation as our core strengths.

Global presence and local support

With our global presence, we are uniquely positioned to deliver standard components and custom-engineered solutions, with full technical and applications support around the world. Our skilled engineers provide total life-cycle support, helping to optimise the design, operation and maintenance of equipment thus improving productivity and reliability while reducing costs. At Ewellix, we don't just provide products; we engineer integrated solutions that help customers realise their ambitions.

Schaeffler Group – We pioneer motion

Ewellix is since 2023 owned by the Schaeffler Group.

As a leading global supplier to the automotive and industrial sectors, the Schaeffler Group has been driving forward groundbreaking inventions and developments in the fields of motion and mobility for over 75 years.

With innovative technologies, products, and services for electric mobility, CO₂-efficient drives, Industry 4.0, digitalization, and renewable energies, the company is a reliable partner for making motion and mobility more efficient, intelligent, and sustainable.

Schaeffler manufactures high-precision components and systems for powertrain and chassis applications as well as rolling and plain bearing solutions for a large number of industrial applications.

Trusted engineering expertise

Our industry is in motion; pushing towards solutions that reduce environmental impact and leverage new technology. We provide technical and manufacturing expertise to overcome our customers' challenges.

Engineering for the future

We work in a **wide range of industries**, where our solutions provide key functionality for business critical applications.

For the **medical industry**, we provide precision components for use in core medical equipment.

Our unparalleled understanding of **assembly automation** systems is based on decades of research into advanced automation components and techniques.

Our deep knowledge of **mobile machinery** provides powerful and reliable electromechanical solutions for the harshest conditions. In an **industrial distribution** setting, we supply linear expertise to our partners, empowering them to serve customers with greater efficiency.

We offer excellence

We have a **unique understanding of linear equipment** and how it's integrated in customers' applications to provide the best performance and machine efficiency.

We assist our customers by creating equipment that runs faster, longer and that is safe and sustainable.

We provide a wide variety of **linear motion components** and **electromechanical actuators** for equipping any automation application, thus helping our customers **increase productivity, reduce their footprint, energy use and maintenance**.

Actuation systems

Ball and roller screws

Linear guides and systems

1

Introduction

- Cost effectiveness
- Controllability
- Stability

Core technologies

Actuation technology

Our extensive experience and knowledge of actuation systems allows us to satisfy the most demanding requirements using linear actuators, lifting columns and control units.

Linear actuators

We offer a wide range of low- to medium-duty actuator designs and configurations for simple industrial or specific health care applications. Our versatile range provides everything from low- to high-load capacities and medium operating speeds to quiet and aesthetically designed systems (↳ **fig. 1**).

High-performance actuators

Our range of high-duty actuators meets the needs of demanding industrial applications with high loads and speeds in continuous operation. These actuators provide the best controllability and reliability for programmable motion cycles (↳ **fig. 2**).

Lifting columns

We offer a wide range of options for several applications. In addition, our lifting columns are quiet, robust, powerful, resistant to high offset loads and feature attractive designs (↳ **fig. 3**).

Control units

Ideal for applications focused on system control, Ewellix control units provide connections for foot and hand or desk switches (↳ **fig. 4**).

Operating switches

Ewellix offers different operating switches to control the position of your equipment. The range includes:

- Hand switches
- Foot switches
- Desk switches

These switches can be used with control units to drive linear actuators and lifting columns or directly with the devices in AC powered versions.

Fig. 1

Fig. 2

Fig. 3

Fig. 4

Ball and roller screw technology

For applications that require driving by transforming rotary action into linear motion, we provide a comprehensive range of solutions including rolled ball screws, roller screws and ground ball screws.

Miniature ball screws

Ewellix miniature ball screws are very compact and provide silent operations (↳ **fig. 5**).

Rolled ball screws

We offer several, highly precise recirculating systems to cover most application requirements which can reduce or eliminate backlash (↳ **fig. 6**).

Ground ball screws

Ewellix ground ball screws offer increased rigidity and precision.

Roller screws

Ewellix roller screws go far beyond the limits of ball screws providing the ultimate precision, rigidity, high speed and acceleration. In addition, backlash can be reduced or eliminated. Long leads are available for very fast movements (↳ **fig. 7**).

Fig. 5

Fig. 6

Fig. 7

Linear guide technology

To provide optimal solutions for all your guiding needs, our product range features shaft guidings, profile rail guides and precision rail guides.

Fig. 8

Fig. 9

Fig. 10

Linear ball bearings

Cost-effective, simple and self-aligning, Ewellix shaft guidings feature unlimited stroke, adjustable preload and excellent sealing performance. They are also available in corrosion-resistant versions and pre-mounted on an aluminium housing as a unit (→ fig. 8).

Precision rail guides

With a range of modular options, Ewellix precision rail guides feature different rolling elements and cages. These guides feature high precision, high load carrying capacity and stiffness, and also come with an anti-creeping system. They are also available as a ready-to-mount kit (→ fig. 9).

Profile rail guides

Featuring unlimited stroke through joint rails and excellent rigidity, capable of withstanding moment loads in all directions, Ewellix profile rail guides are ready to mount and provide easy maintenance along with high reliability. They are available in ball or roller versions as well as standard and miniature sizes (→ fig. 10).

The terms used in the catalog are listed in a **Glossary** on **page 303** and the **Symbols** are described from the **page 307**.

Product overview

Linear actuators

Electromechanical linear actuators enable precise, controlled, and repeatable push/pull movements in linear drive applications. Linear actuators serve as efficient, virtually maintenance-free, and environmentally friendly alternatives to hydraulic or pneumatic types.

Actuators with a modular design and open architecture offer opportunities to choose and integrate components to achieve customized solutions within existing envelopes. Application potential expands with the introduction of technologies for specific purposes, such as hall sensors, limit

switches, potentiometers, friction clutches, or back-up nuts. Equipped with brushed DC motor or AC motor, the duty cycle is rated up to 20% or up to 40% if equipped with a AC motor.

3. Screw
4. Nut
5. Electrical motor
6. Gearbox
7. Electrical cable
8. Rear attachment
9. Outer tube or protection tube
10. Sealing system

Lifting column

Lifting columns enable precise, controlled, and repeatable lifting movements of in linear drive applications including with those with torsion and off set loads.

Lifting columns with a modular design and open architecture offer opportunities to choose and integrate components like linear actuators or drive to achieve customized solutions within existing aluminum profiles. Application potential expands with the introduction of technologies for specific pur-

poses, such as hall sensors, limit switches but also Integrated Circuits for switch mode power supply and motor control. Equipped with brushes DC motor or AC motor, the duty cycle is rated up to 10%, which means when the load is the maximum.

3. Screw and nut
4. Cables through
5. Power supply
6. Electrical Motor
7. Gearbox
8. Control board
9. Cable connector

Lead screw

Screws

Ball and roller screws are key components to build electric cylinders. They transfer rotary movements of the motor into linear movements. Their efficiency and their load and speed capabilities have a very big influence on the performance of electric cylinders.

Thanks to decades of experience with manufacturing ball and roller screws and continuous product and process development, Ewellix builds electric cylinders with precision screw solutions that fulfill the most demanding applications in terms of efficiency, precision, durability and value. All screws are made of high-strength materials with specific heat-treatment.

Lead screw

These screws transmit torque into linear motion through direct sliding friction. A typical assembly consists of a steel screw and plastic nut. Some of the electric cylinders are equipped with lead screws with a relatively high friction coefficient that makes them well suited for self-locking application. Lead screw actuators accommodate high static force, withstand excessive vibration, operate quietly, and represent cost-effective solutions.

Precision rolled ball screws

Precision rolled ball screws

Ewellix ball screw assemblies provide high performance solutions suitable for a wide range of applications where high loads, precision driving, durability and value are prerequisites.

High technology machinery associated with precise control of the cold forming and metallurgical processes enable the production of screws that offer virtually the same accuracy and performance of ground ball screws, but at a lower cost. Standard lead precision is G9, according to ISO 286-2:1988. Ewellix production meets G7 lead precision for screw shaft nominal diameter starting from 20 mm. On request, Ewellix can deliver ball screws with G5 lead precision, according to ISO 3408-3:2006, defined for positioning screws, and matching the lead precision of G5 ground ball screws.

Ewellix engineering tools

Web-based solutions

To simplify the product selection process, Ewellix offers a set of free Web tools that allow a quick and easy navigation into the complete linear motion offering.

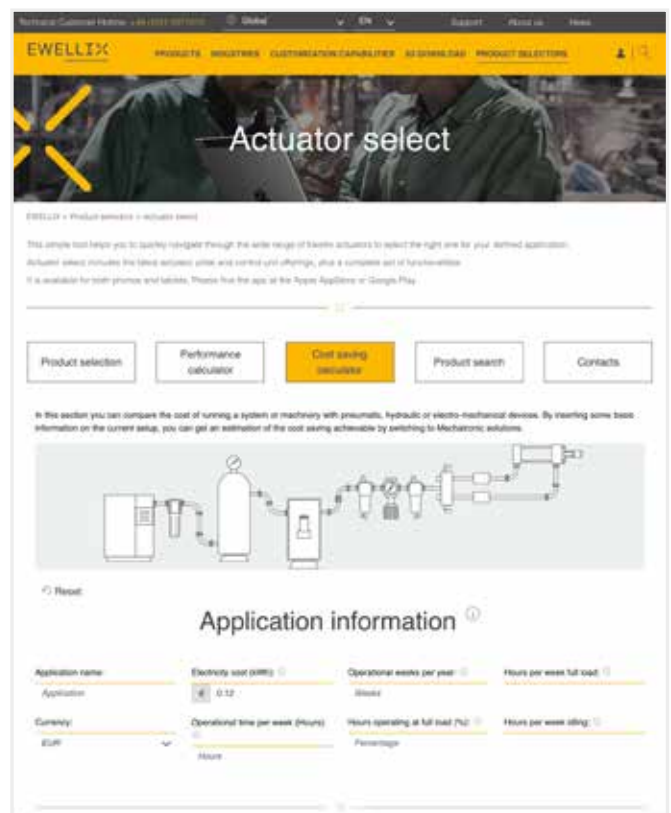

Actuator Select

Users can choose the desired product family among Columns, Linear Actuators, Rotary Actuators and Controls. Then, by entering few simple parameters, they will be guided in the product selection.

Key features include:

- Four complete product lines
- Dynamic filtering of the results
- Result ranking by application
- Product comparison (up to 3 at time)
- Indication of compatible control unit for selected Column or Actuator
- Cost saving calculator
- Direct link to product drawing, technical datasheet and catalogues

A web-based version of the tool is available at ewellix.com/actuator-select

Actuation System set-up

Linear actuator definition and type

Electro-mechanical linear actuators enable precise, controlled, and repeatable push/pull movement in linear drive applications.

Linear actuators serve as efficient, virtually maintenance-free, and environmentally friendly alternatives to hydraulic or pneumatic types.

Standard versions can handle loads as great as 50 kN, deliver speeds over 150 mm/s, and travel as far as 700 mm. They can be self-contained in aluminum, zinc, or polymer housings and ready-to-mount for easy plug-in operation.

Actuators with modular design and open architecture offer opportunities to choose and integrate components to achieve customized solutions within existing envelopes. Application potential expands with the introduction of technologies for specific purposes, such as hall sensors, limit switches, potentiometers, friction clutches, ball detent clutches, or back-up nuts.

Screw-type linear actuators powered by an electric AC or DC motor basically consist of a lead screw (threaded shaft/spindle) with drive nut and push tube with a gearbox between the motor and the screw also present.

When power is supplied, the motor rotates the lead screw, which causes the drive nut to travel and extend the push tube. Reversing the motor rotation retracts the push tube.

Ball screw vs. acme screw

Traditional types of lead screws include ball screws and acme screws, whose specification will be influenced by an actuator's configuration and load requirements.

Fig. 1
Ball screw

Fig.2
Acme screw

Ball screws

All-steel ball screws consist of a screw shaft, ball nut with a ball recirculation system to convert rotary motion into smooth, accurate, and reversible linear motion (or torque to thrust) (↳ **fig. 1**). The row of circular rolling elements is self-contained in a closed system between the nut and screw for a design exhibiting extremely low friction coefficients. The low frictional resistance minimizes wear, improves efficiency, and reduces operating temperature for longer service life.

Ball screws can handle high loads, with a very good efficiency, achieve high duty cycles, operate over a wide temperature range, and deliver the precision necessary to enable actuators performing over long periods at high speeds and requiring high dynamic capability.

Brakes usually are adopted in ball screw actuators or non-self locking gear boxes to prevent back-drive and provide an high static load performance.

Acme screws

These screws transmit torque into linear motion through direct sliding friction. A typical assembly consists of a steel screw and plastic nut (↳ **fig. 2**).

Some of the products are equipped with acme screws with a relatively high friction coefficient that makes them well suited for self-locking applications. Acme screw actuators accommodate high static load, withstand excessive vibration, operate quietly, and represent cost-effective solutions. Brakes could be adopted to increase the static load performance.

Performance considerations

Beyond the basic fundamentals of actuator operation, applications may require feedback on position and/or direction, limits on motion or travel in a particular direction, or protection against dynamic overload. Enabling technologies have been developed for these purposes.

Limit switches

Its purpose is to limit actuator motion or travel in both direction. It is used on DC and AC versions (→ fig. 3). When activated, the switch typically opens an electrical contact integrated on the electrical circuit of the motor. By reversing the voltage, the limit switch circuit is over pass, the motor runs in the opposite direction and the switch is released. The second limit switch will proceed in the same way but for the opposite direction. These devices prevent actuators from running into the mechanical ends.

Fig. 3

Limit switches

End-stop output

Its purpose is to provide output information on when the actuator reaches a position in a particular direction (→ fig. 4). When activated, the switch opens or closes an electrical contact. When the contact is closed, current will flow through the switch; when the contact is open, no current will flow through the switch. These devices could be used on the application to prevent actuators from running into the mechanical ends and may allow for the adjustment of stroke length. End-stop output could be used by a control board to limit the stroke of the actuator, for instance.

Fig. 4

End-stop outputs

Hall sensors

These rotary or linear sensing devices are incremental no contact sensors that are used to define the relative position of an actuator. Two sensors detect the changing magnetic field created by a rotating magnet and then relay corresponding output pulses to a control unit to provide the travel feedback. Two sensors could detect also the direction of the movement (→ fig. 5). After a homing procedure, the travel distance can be defined with counting the pulse.

Fig. 5

Hall sensor

Potentiometer

A potentiometer is an analog feedback device. The potentiometer is considered an absolute sensor with unique value in each position. Sometimes it is called a variable resistance that can be read and fed into a controller for positioning control of the application (→ fig. 6).

Fig. 6

Potentiometer

Absolute analogue position output

An absolute analog position output uses a non-contact sensor, so no wear and the absolute positioning provide an unique value in each position by voltage from 0.5 to 4.5. The input voltage is 5V or 10 to 55 V depending the series. The output signal can be read and fed into a controller for positioning control of the application. It is the best of the two solutions, hall sensor or potentiometer without compromise (↳ **fig. 7**).

Friction clutch

This function will protect the actuator from mechanical damage when it reaches either of its mechanical end positions or when the maximum dynamic load is momentarily exceeded. A friction clutch consists of a series of steel plates engaging a hub and a series of friction rings engaging a housing (↳ **fig. 8**).

Pressure is exerted on the plates and rings by an adjuster acting through a spring and pressure plate. The friction clutch is not intended for use as a load limiter, but only for protection of the actuator and end- use equipment in the event of dynamic overload.

Ball detent clutch

A ball detent type clutch transmits force through hardened balls which rest in detents on the shaft and are held in place with springs. An overtorque/load condition pushes the balls out of their detents, thereby decoupling the lead-screw from the motor.

Back-up nut

This prevents an actuator from collapsing if a drive nut fails. The back- up nut is usually in metal, exhibits greater anti-shear strength than the drive nut, and only makes contact with the threads of the spindle when the threads of the drive nut fail (↳ **fig. 9**). The back-up nut carries the load and may be able to lower the load (signaling need for repair).

Slip stick effect

The cycle of alternating slipping and sticking as two surfaces rub against each other results in vibration and noise. Resonances within other materials can occur. This effect can sometimes be heard, felt or seen. With linear actuators and columns, slip stick has been witnessed between the Delrin and aluminum or steel, such as between drive nut and spindle, and glide pad and extrusion.

Product range comparison

Linear actuators

Ewellix offers a wide range of linear actuators in terms of push or pull load, speed, stroke length and input voltage. Most of them are approved as a component of a medical device that complies with IEC 60601-1 and UL mark RU.

Family	Load kN	Speed mm/s	Stroke mm	Voltage V		See page
MATRIX	8	13	700	12, 24		57
RUNNER	12	8	700	24		70
CAJA 35C	3,5	7,5	250	24		76

CAT and CAR	4	193	700	12, 24, 120, 230, 3x400		137
CAHM	50	74	700	24, 230, 3x400		187

Harsh environment

Medical

Some products are designed for a specific application but are suitable for others applications that request the similar performance.

If you request a higher force than 12 kN, we invite you to review the **High performance actuator catalogue (PUB NUM IL-05001)**.

Force and speed capabilities

Diagram 1 provides a quick overview of the rated load and the speed of the actuators. Use this graph to quickly evaluate which actuator could fit best in your application.

The rated load describes the weight that the actuator can push or pull at the rated duty cycle without overheating. The speed is the maximum linear speed the actuator can reach without load when powered at the rated voltage.

Diagram 1

Columns

Ewellix offers a wide range of lifting columns in term of push and pull load, offset load in movement, stroke length and input voltage. Most of them are approved as a component of a medical device that complies with IEC 60601-1 and UL mark RU.

Product	Load kN	Bending moment Nm	Speed mm/s	Stroke mm	Voltage V		See page
CPMA-B	2	250	15	400	24, 100 to 240		194-202

Force and speed capabilities

Diagram 2 provides a quick overview of the rated load and the speed of the actuators. Use this graph to quickly evaluate which actuator could fit best in your application.

The rated load describes the weight that the actuator can push or pull at the rated duty cycle without overheating. The speed is the maximum linear speed the actuator can reach without load when powered at the rated voltage.

Some products are designed for a specific application but are suitable for others applications that request the similar performance

Diagram 2

Bending moment vs retracted length for stroke length of 400 mm

Control units

Ewellix offers a wide range of control units in terms of number of connections, functions and input voltage. They are compatible with Ewellix actuators and columns. Most of them are approved as components for medical devices that comply with IEC 60601-1 and UL mark RU.

In order to select the proper accessories for linear actuators and lifting columns, please use the table below.

Start selecting your actuator or column and find horizontally the compatible control units identified by a black dot, then vertically select the appropriate operating switches.

Some products do not need control units, so please continue horizontally to find the appropriate operating switches.

Input voltage

AC or DC, this is the voltage that is used to power the system or the stand alone linear actuator or lifting column.

For instance, a AC system is one powered by a cable connected to the mains power that provides alternating voltage, typically 230 V AC in Europe and 120 V AC in USA. AC system or linear actuator or lifting column doesn't say that the motor is an AC motor.

For a linear actuator or a lifting column, the motor voltage could be different than mains power. The control unit that

drives the DC lifting column or linear actuator is equipped with a power supply to convert the voltage. The linear actuator and the lifting column could be also equipped with a built-in power supply. In this case, the equipment is powered by the mains power but the motor and other equipment are powered by a DC cable. This is the most convenient system; easy to power and to control.

Case of stand alone lifting column with AC motor: TLC

Case of stand-alone linear actuator with DC motor and built in power supply: MAX7

Case of stand alone lifting column with DC motor and built in power supply: CPMA

Case of AC System with DC linear actuator and lifting column: SCU+TLG + Matrix

How to read a performance diagram

In the product range chapter, a technical description is available for each actuator family. This includes performance overview, a detailed product description, motors and adapter information. In addition to that, each actuator type and size has a dedicated table with the main technical data.

In particular, for the lifting column, we describe the offset load performance.

Here below is a general description on how to read the axial force /linear speed diagram.

1

CPMT1-1M, -2M

Load [N]

Offset load at full extension

For a CPMT1-2M

1. (4 500 N at 200 mm): The column can lift and lower a load of 450 kg with a center of gravity located at 200 mm from the center of the column.
2. (3 000 N at 300 mm): The column can lift and lower a load of 300 kg with a center of gravity located at 300 mm from the center of the column.
3. (3 000 N at 450 mm): The column can lift and lower a load of 300 kg with a center of gravity located at 450 mm from the center of the column.
4. (1 000 N at 450 mm): The column can lift a load of 100 kg with a center of gravity located at 450 mm from the

center of the column but during the lowering, the retraction will be not optimal. We recommend to increase the weight or change the load distance. To Increase the load distance, you can change the center of gravity of the lifted part.

Product benefits

Pneumatic and hydraulic replacement

Linear movements in modern applications place high demand on travel profiles. Pneumatic and hydraulic cylinders quickly reach their system performance limits. Ewellix electric cylinders offer improved performance and simpler setup in applications that were traditionally served by pneumatic and hydraulic cylinders.

Along with the elimination of air or oil in applications, Ewellix electric linear actuators offer many advantages. Key benefits include a high degree of flexibility, positioning accuracy even to any intermediate target, improved productivity through low maintenance, new options in programming, and seamless integration into machine control systems. These benefits enable new and reliable concepts that can be integrated into a variety of production processes, ultimately allowing new application possibilities.

Electric linear actuators with ball screws provide an energy-saving alternative to pneumatic.

Electromechanical layout

Pneumatic layout

Hydraulic layout

Replacement of pneumatic cylinders

Pneumatic cylinders are based on a technology which was invented in the year 1728. The commercial use of this technology started at the beginning of the 20th century. The principle of pneumatic technology seems to be simple. Air is pressed via valves either on one side or the other side of a pneumatic cylinder to cause a movement of the push tube.

There is a lot of equipment needed to make the pneumatic system run. The more cylinders in a system, the smaller its section of the cost cake for each cylinder. For a low number of cylinders in a system, the common equipment cost is quite high.

Ewellix electric linear actuators operated by motors with position feedback are fully controllable.

Replacement of hydraulic cylinders

Hydraulic cylinders are traditionally used in high load applications. The force range of Ewellix electric linear actuators has been extended. Indeed, Ewellix electric linear actuators can provide a force up to 12 kN for DC motor version, up to 50 kN for AC motor version, opening up more applications to switch from hydraulic to electric solutions. Ewellix electric linear actuators are more reliable, easier to control and cleaner to operate than hydraulic cylinders. They eliminate typical operational problems such as contamination, oil leaks, fluid maintenance checks and disposal procedures and require no ancillary equipment.

The technology of hydraulic cylinders is based on Blaise Pascal's hydrostatic law and offers virtually unlimited force. It's the most powerful technology for many applications. The cost for a hydraulic cylinder is moderate, but there is a lot of installation equipment needed to make it work. The operating and maintenance cost is high while the waste disposal is problematic.

Hydraulic cylinders get their power from pressurized hydraulic fluid (typically oil). The installation requires expensive plumbing, filtering, pumps and electronic/ fluid interfaces (valves). The control is quite complicated when considering hysteresis, supply pressure and temperature changes. Hydraulic systems are reliable, as long as the hydraulic fluid is well maintained. With low maintenance, the seals are prone to leak which results in contamination.

Ewellix electric linear actuators solve many of the problems of hydraulic cylinders. The motor is directly linked with the linear movement of the push tube which allows excellent position feedback and full controllability. The power transmission is typically made with a rotating screw and a nut with or without rolling element to carry loads of up to 50 kN with AC motor version. The installation is simple, the maintenance low and there is less noise and no contamination. Due to the efficiency of up to 50%, the operating cost is very low.

Controllability

Electric drive systems use a screw that offers an easy controllability by counting the number of turns of the screw or other elements mechanically connected. You can control the position, the displacement as well as the speed.

Precision

The precision depends on the resolution of the position feedback system and how the output is used by the control board. The backlash of the driving mechanism will influence if the direction of the load and movement is changing. The accuracy also depends on the set up and homing procedure of the system.

Holding force

Electric drive systems offer a high stability and self-locking that prevent unplanned movement in case of static overload or shock applied even if not powered. In addition of built-in brake and the short circuit of the brushed DC motor used in the most of the case, all mechanical driving part participates of the stability.

Degrees of protection provided by enclosures

The IP Code, International Protection Marking, IEC standard 60529, sometimes interpreted as Ingress Protection Marking, classifies and rates the degree of protection provided against intrusion (body parts such as hands and fingers), dust, accidental contact, and water by mechanical casings and electrical enclosures (↳ fig. 1).

It is published by the International Electrotechnical Commission (IEC). The equivalent European standard is EN 60529.

Safety and environment friendly

The safety typically starts by the high holding force as compared to the load applied during the normal use of the application that should be lower than the rated load of the electric drive system. The risk of abnormal use of the application should also be considered.

For some application or function in the Medical industry, the manufacturer of the medical device should manage the risk assessment and comply with some regulation as IEC 60601-1, general requirements for basic safety and essential performance. As a component of the medical device, some Ewellix electric drive systems were tested under the same condition to demonstrate compliance to IEC 60601-1 and are registered by UL to be marked RU. Saying that the Safety factor of the complete system is 2 or 2.5 or 4 is not enough. This standard requests that each individual component of the drive system used on a suspended mass be checked and could request a tensile safety factor up to 12, depending on the material, the possible alteration, the backup system and the calculation method.

Nor do electric cylinders have problems with fluid leaks or contaminated air. Moreover, the absence of fluid constantly operating under high-pressure eliminates potential risks to operators in case of cylinder failure.

Without fluid to drive or keep in position and with a good ingress protection up to IP66M, means during movement and IP69K when static, the risk of leakage and contamination is almost negligible. With a static ingress protection, the actuator can be cleaned easily. Actuators rated IP69K accept a high pressure and hot temperature cleaning procedure, that contribute to the later elimination of the risk of pollution.

Fig. 1

RoHS

Our standard products fall under category 11 in Annex I to Directive 2011/65/EU and therefore do not need to comply with the provisions in the directive before July 22, 2019.

Nevertheless, most of our standard products are already mentioned on a list where we declare that the products do not contain any of the restricted substances over the threshold values stated in the Annex II to Directive 2011/65/EU in any homogenous part of the product.

REACH

Ewellix has a policy, process and dedicated resources in order to comply with REACH, the Regulation concerning Registration, Evaluation, Authorization and Restriction of Chemicals.

CE mark

Most of our product have CE mark with a Certificate of Compliance signed by the factory.

Installation

The installation is simplified. In most cases, the electric drive systems request just the mechanical connection of the 2 attachment points and the electrical connector plug in. Then, it is ready to work.

Virtually maintenance-free

Ewellix expertise in manufacturing the main components of linear actuator – screws, bearings, guides, seals and lubrication – allows us to maximize service life. With the special hardening treatment of the screws and balls, the linear actuators keep high performance and efficiency during the service life. Compared to their fluid power alternatives, the electromechanical linear actuator systems require no maintenance.

With electromechanical system technology, filter changes and air bleeding are a thing of the past. Simply mount the actuator, plug in the cable to the control unit or a Programmable Logic Controller and you are up and running in record time.

Tests

Environmental, electrical and mechanical tests are performed in the Ewellix facilities or by external laboratories and recorded internally or by external bodies like UL.

Customization capabilities

Ewellix electric cylinder customization

On the standard electric cylinder product range, Ewellix offers an extensive customization program that is able to meet virtually any application need. There are 3 levels of customization that depend on specific requirements and the complexity of implementation.

Basic customization

These basic design options can be implemented quickly and easily:

- Stroke length
- Retracted length
- Attachment and Mounting holes
- Colors
- Cables and connectors
- De-rated load

Advanced customization

These design options are more complex and require a dedicated project with the customer:

- Materials
- Housing
- Guiding system (for column)
- Gearbox (e.g., with hand crank)
- Screw (e.g., lead, treatments)
- Screw Nut (e.g., additional backup nut)
- Painting and surface treatments
- Output signal

Complete customization

In case the standard actuator offering cannot fully satisfy the technical requirements, Ewellix can offer completely customized solutions that are tailor made for each customer.

Examples of basic and advanced customizations

CPMA coloured tubes

Lifting columns with cable through the tubes can allow the designer of the equipment to remove shroud or cover even if wires are requested at each side of the tube set. To enhance its integration in the application, Ewellix proposes a customized color for the inner and outer tubes. This is typically proposed with the CPMA and CPMB lifting column but can be also requested for other lifting columns or actuators (↳ **fig. 1**).

CAHB 10 with connector

Cable length and connector can be customized according to a request have perfect integration with a quick assembly on the application and a drop-in solution (↳ **fig. 2**).

CAHB 2xE with trunnion mount

To optimize the design of the application or to create a drop-in solution, Ewellix can customize the retracted and extended lengths and the attachments as well (↳ **fig. 3**).

Column low boy

Precise movement, stiffness and reliability are some of the key factors when it comes to patient tables. Ewellix Low-boy columns provide the precision for easy and safe patient entry with maximum lift functionality. The simple and open motor interface gives the option to mount every motor on customer's side and makes the system very flexible and accessible (↳ **fig. 4**).

Fig. 1

Fig. 2

Fig. 3

Fig. 4

Clam shell grill

Clam shell grills with electrical lifting are automatized with a linear actuator. The cooking of the steak is exactly as requested by the customer and the operator is more efficient (→ fig. 5).

A customization of the motor could be proposed if a long life time is requested.

To ensure perfect French fries, the lifting of basket is automatized with a linear actuator.

The operator appreciates also the simplicity and the comfort and can focus on other preparation.

Special motor and external switches

For specific applications such as commercial kitchen equipment where a higher duty cycle and long life time are requested, Ewellix can propose specific motors like brushless DC version. Ewellix could also propose the integration of external switches to have multiple adjustable position feedback or other full system integration (→ fig. 6).

Very long stroke and graduated tube

On Applications like Medical fluid carts where the liquid pressure is provided by the height of the liquid bag, Ewellix can provide an automatized solution based on a linear actuator with a long and stable inner tube of 1 meter to hang the liquid bag (→ fig. 7).

The laser etched graduated tube provides quick visual information about the height.

Marked on the tube

On Applications like Medical fluid carts where the liquid pressure is provided by the height of the liquid bag, Ewellix can provide an automatized solution based on a linear actuator with a long and stable inner tube of 1 meter to hang the liquid bag (→ fig. 8).

The laser etched graduated tube provides quick visual information about the height.

Application examples

Medical mobile C-arm

In mobile C-arms, the safe and smooth positioning of the x-ray system is essential.

Ewellix columns deliver high offset load capability, stability and safety to achieve the best possible performance in this application.

The columns can be individually configured to best match each customer's requirements. Additional customizations, such as cable channelling or special hardware interfaces, are possible and simplify the final installation.

Also the monitor can be adjusted the position (up and down); thanks to the Ewellix actuators is possible to set the right position according to the C-arm.

Medical imaging tables

Imaging tables are used for safely positioning patients during imaging procedures, such as general x-ray, CT or MRI.

Ewellix provides different solutions to design the lifting function. For scissor tables, Ewellix medical actuators with high safety levels can be used.

Alternatively, two synchronized columns deliver an easy to install and very stable complete solution for a table base. Such a column solution can greatly reduce development costs for our customers.

Medical surgical chair/table

Surgical tables or procedure chairs are used in a wide range of medical applications, either in the operating room or in smaller clinics. To optimally position a patient for different procedures, multiple actuators are installed.

Ewellix is able to provide a complete UL certified mechatronic system including actuators, columns and control units, to meet customer requirements for functionality and safety. Ewellix columns offer a strong single pedestal solution with low retracted height and high stroke options to meet market demands. Configurable medical controllers can be customized for each customer to exactly meet functional demands.

With an Ewellix system, the market challenges of increasing patient weight, lower entry height and faster patient throughput can be met.

Medical dental X-ray

1

Dental panoramic x-ray equipment is able to generate a detailed 2D/3D image of all teeth. Ewellix actuators and drive trains help our customers implement the height adjustment in this equipment. High speed, high stroke and a high level of safety are critical features of these actuators and a core strength of Ewellix. A modular set of screw and motors enable an optimal configuration to meet every customer's requirements.

Medical incubator

Modern designs of incubators reduce the stress for babies and minimize the numbers of transfers from incubators to beds. Incubators require columns with very smooth movement to help keep babies safe and comfortable. Thanks to its long experience with medical equipment, Ewellix has identified such needs and developed columns to fulfil the exact needs and requirements of baby care, such as soft start/stop, extremely quiet operation and virtually vibration free movement.

Medical ophthalmic

Ophthalmic instrument tables are used to lift the eye care instruments and measurement devices. All of these instruments and devices are placed on a small table plate and need to be adjusted in height to find the position when the doctor or nurse is doing the measurement on the patient sitting in front of the table. Ewellix columns offer all the needs of adjustable height functions like iteration or small movements to fine tune the position to help for better accessibility and comfort of the operators and patients.

Adjustable industrial workstation

Incorporating Ewellix columns into your workstation will help create ergonomically appropriate work patterns and ultimately result in satisfied users and increased productivity. Our lifting columns offer the flexibility and reliability required to create a completely ergonomic workplace in a variety of industrial environments.

Industrial automation production machines

Electromechanical linear actuator can replace pneumatic or hydraulic cylinder to provide control positioning of the door or hood used time to time thanks to the positioning feed-back that secure the movement. It is also easy to operate by PLC or switches.

Factory automation

Competitiveness in factory automation entails a permanent productivity improvement process. In the search for more efficient and ergonomic solutions, many manufacturers have successfully used actuators in many working machinery. The automated movement for hoods and covers helps to reduce production downtime and lessen the workload for operators. In addition, quick lifting of heavy machine parts is helping to increase the speed of the machine maintenance. A lifting system will provide an easy access to component of the machine during maintenance operation like cleaning or repair.

Automation conveyor system

1

Conveyor lines are heavily used across different industries and applications. The different automatized movements are usually achieved by pneumatic cylinders. The need of increasing energy efficiency and simplifying the system has led to a usage of electro-mechanical actuators over the conveyor line.

For a stop-pallet function, CAHB-10 actuators have been successfully used to replace standard pneumatic cylinder, thanks to their compact dimension and easy controllability.

By using electro-mechanical actuators, it has been possible to have a fully electric line, getting rid of the whole pneumatic system (cylinders, hoses, valves...).

Agriculture equipment

Harvester combine

Today's farmers are challenged by the demands on cutting costs while increasing the crop yield. Modern harvester combines use many linear actuators to adjust on demand different equipment like sieve or concave clearance that help to minimize lost crops, thus resulting in the best crop yield. The position signal from the actuator ensures that the position is reached. At the appropriate adjustment, any shock or vibration should move the position of the actuator thanks to the high push and pull force and the high holding force of the linear actuator. To avoid pollution by oil leakage or missing a cleaning process, request the best class of Ingress protection IP69K/66M with a vent.

Round baler

Today's farmers are challenged by the demands to cut costs while increasing productivity. The wrapping process of rounded bales needs an accurate movement to position and cut the net or the twine.

1

Trucks

Today's freight companies are challenged by the demands on cutting fuel consumption and better productivity. The truck manufacturers develop innovative devices to optimize air circulation while driving, with or without a trailer. The linear actuator, with or without a motor, provides a quick, safe and precise adjustment of the roof air deflector.

Special vehicles Sweeper

1

To improve the productivity and increase the comfort and safety of the worker, the electro mechanical linear electrical systems are used on many applications such as warning sign lifter on a vehicle or brush adjustment in the sweeper. Quick and easy to control, the linear actuators are also reliability with an ingress protection IP69K/66M and a vent.

Construction equipment

Today's construction companies are challenged by the demands on cutting fuel consumption and providing better productivity. Products such as Articulated Dump Trucks, wheel loaders or rollers, the engines are more sophisticated to comply with the CO₂ emission regulations and the engine hood are bigger and heavier due to the cooling system. The maintenance operation requires the engine hood be lifted. The operator needs a fast and safe operation. The linear actuator can quickly lift the engine hood but also keep it open thanks to the high push force and the high holding force that keep the hood at a stable position even if there is shock or wind.

Building automation

Modern commercial, administrative and industrial buildings, as well as schools and care centers are often fitted with a variety of small electronic appliances which can perform important functions remotely and simply. Actuators for light domes, doors, windows and smoke and heat outlet systems are installed in many modern buildings. These actuators open and close traditional and tilting windows, light domes, facade elements, sun blinds and smoke and heat outlet shutters, at the touch of a button or automatically, using climatic (wind/rain) sensors and temperature and smoke sensors.

Food and beverage Commercial kitchen equipment

Kettles

Machine flexibility, process control and cost efficiency are important in modern industrial kitchens. High end food processing equipment requires automated, repetitive and sometimes difficult operations. Whether it is raising or lowering an exhaust hood or a complete stove, actuators can enable people to work more comfortably and efficiently by adjusting the environment to their own personal needs.

Fryer basket

Clam shell grill with electrical lifting are automatized with a linear actuator. The cooking of the steak is exactly as requested by the customer and the operator is more efficient. A customization of the motor could be proposed if a long life time is requested.

To ensure perfect French fries, the lifting of basket is automatized with a linear actuator. The operator appreciates also the simplicity and comfort and can focus on other preparation.

2

Selection process

- Medical
- Harsh environment
- Automation

Simplified selection process

By following the described flow (↳ **diagram 1**), the user can select the right solution based on linear actuator, lifting column and electronics that fulfill the application needs. If further assistance is needed, please contact Ewellix to get complete technical support (↳ **page 3**).

AC version

- Selection by load and direction, offset load if column, stroke, speed, IP, Self-locking/holding/static force dimension.
- Verify the environment and standard: IP, duty cycle, temperature, standard
- Select accessories if requested. Power cable or Power cord, connection plates, wires, inlet / outlet boxes
- Select the compatible operating device / switches per number of functions to control.

DC version

- Selection by load and direction, offset load if column, stroke, speed, IP, Self-locking/holding/static force dimension.
- Verify the environment and standard: IP, duty cycle, temperature, standard
- Select the control unit: Channel per motor, output per channel, Sum output power (see compatibility Matrix), accessories
- Select the compatible operating device / switches per number of functions to control.

See **pages 52** and **53** for more information.

Diagram 1

Selection by load and direction, off set load if column, stroke, speed, Self-locking/holding/static force, dimensions

- Rated load should match with the maximum force applied to the actuator by the application during the movement. Consider the “worst case scenario” and also the direction; push is the extension and pull is the retraction direction.
- For Column, it is the load and offset load / distance that should be considered.
- The static load should match with the force applied on the actuator by the application when the actuator is static. Consider the dynamic effect of vibration or chock on the application.
- The stroke length of the actuator including the tolerance should match with the travel distance of the application. In case of limit switches option, the extra stroke length to reach the mechanical end stop of the actuator could be considered for added safety.
- The speed should match with the expected running time. Consider that the speed will change depending on the load but also depending on the voltage fluctuation in case of a DC motor, except for a Switch Mode Power Supply.
- For some products, you could select the attachment dimension and retracted length. Consider the tolerance.

Verify the environment and standard: IP, duty cycle, temperature, standard

- Each product should have an Environmental and standard specification that should match the environment of the application.
- Ingress Protection.
- Ambient Temperature during working condition, storage condition.
- Duty cycle % or “**Time ON / Time OFF**” are specified.
- The longest running time should not exceed the **Time ON** specified.
- The shortest rest time should be longer than the running time multiplied by the “**Time ON / Time OFF**” specified, or running time multiplied by (1- Duty cycle specified) and divided by duty cycle.

Formula:

$$\text{Rest time} > \frac{\text{Running time} \times \text{Time ON}}{\text{Time OFF}}$$

or

$$\text{Rest time} > \frac{\text{Running time} \times (1 - \text{Duty Cycle}\%)}{\text{Duty Cycle}\%}$$

Example:

Time ON / Time OFF = 85 s / 340 s or Duty Cycle 20%;
the Running time must be less than 85 seconds.

If the running time is 30 seconds, the Rest Time should be more than

$$\frac{30 \times 340}{85} = 120 \text{ seconds}$$

or

$$\text{Rest time} > \frac{30 \times (1 - 20\%)}{20\%}$$

so

$$\text{Rest time} > \frac{30 \times (1 - 0,2)}{0,2}$$

so at least 120 seconds

Some products are designed for a specific application but are suitable for others applications that request the similar performance.

Select the Control Unit: Channel per motor, output per channel, Sum Output power (see compatibility Matrix)

- Select the control unit that is compatible with the actuator or column selected. Consider the sum of the number of channels requested by each product; some columns could request 2.
- Accessories can be selected: power cable or power cord, extra wires, Inlet and Outlet boxes, Connection plates.

Select the compatible operating device / buttons per number of functions to control

- Select the operating device that is compatible with the control unit.
- The type of switch must be selected: the switch can have different number of buttons according to the numbers of functions to drive (i.e. for only up and down function is necessary two buttons); number of buttons increase according to the number of actuators or columns to drive or if memory position or other functions are needed.

Matrix series

The Matrix series is designed for medical devices and includes powerful AC and DC linear actuators using DC motor.

They run very quietly, take up little space and can be installed at virtually every angle in vertical or horizontal position. The series is medical approved by third parties and available with options like anti-pitching, incremental position feedback and emergency lowering. The Matrix series can be supplied as a full system with controls, operating units and accessories.

Features

- Designed for medical devices
- Full system with controls, operating units and accessories
- Back up nut as standard
- Safety factor up to 4

Benefits

- Synchronization possible
- Silent operation
- Compact and aesthetic
- Back-up nut as standard

Cable / Connecting plug

- 0 B Coiled, 0,75 m (not stretched) / DIN8 plug
- C 5 Straight, 2,5 m / DIN8 plug
- 0 A Coiled, 0,75 m (not stretched) / Jack plug
- 2 5 Straight, 2,5 m / Jack plug
- Special cable length on request

Orientation of rear attachment

- 0 No fork head (customized option)
- 1 Standard (as drawing)
- 2 Turned 90°

Option 1

- 0 No option, only valid for actuator "A" (push and pull)
- E Quick-release +EKZm, push, fork head bore parallel to button (for actuator design "C" is L= +115 mm)¹⁾
- F Quick-release +EKZm, push, fork head bore 90° to button (for actuator design "C" is L= +115 mm)¹⁾
- K Electrical anti-pinching protection, motor direction pull
- L Electrical anti-pinching protection, motor direction push
- M Push load, for actuator version "B" and "C"
- N Pull load, for actuator version "B" and "C"

Option 2

- 0 No option
- F 2-Hall encoder, DIN8 plug
- M Lifetime monitoring
- P Lifetime monitoring, 2-Hall encoder, DIN8 plug

Option 3

- 0 No option
- V Emergency lowering, fork head bore parallel to clamping lever (for actuator design "A", L+30 mm)
- W Emergency lowering, fork head bore 90° to clamping lever (for actuator design "A", L+30 mm)

Customized

¹⁾ EKZm: mechanical anti-pinching min. stroke 150 mm up to 300 mm

Options shown in red are only available on request. Contact Ewellix for more information on minimum quantities and additional costs.

Matrix7

Linear actuator

Benefits

- Universal power supply
- Power indicator
- Plug and play with integrated control unit
- Designed for medical devices, compliant to IEC 60601-1

Technical data

CAHB series

Linear actuator

CAHB series with 7 families of linear actuator, virtually maintenance-free, self-locking up to 2 times the rated load and up to IP69K/66M, covers low, medium and high loads for mobile applications,

Additional design options are available like limit switches, positioning feedback and manual override.

The smart CAHB-20S, CAHB-21S and CAHB-22S offer unique features at a competitive cost with integrated controller and advanced functions.

Features

New smart version CAHB-20S, -21S and -22S

- Integrated controller with I/O and CAN bus SAE J1939
- Motion with soft start / -stop and parallel movement of 2 actuators
- Key actuator functions monitoring with diagnostic

For all versions

- Electronic or mechanical overload protection and thermal protection
- Long stroke and high speed
- High holding force up to 20 000 N
- Low backlash
- Absolute or incremental Position feedback and limit switches option
- Manual override option
- Ingress protection IP69K/66M with vent
- Anti-rotation with free spinning (option for E design)
- Stainless steel push tube with anti rotation, free spinning attachment and corrosion protected metal parts
- Wide temperature range (-40 to 85 °C)
- High efficiency
- Virtually maintenance-free
- Mechanical, electrical and climatic tests

See **pages 130 to 135** for test results.

Benefits

- Higher productivity with fast and smooth movement
- Easy and quick integration into customer equipment
- Higher reliability and protection
- Cost effective and virtually maintenance-free
- Monitoring and onboard diagnostic

CAHB-10

Linear actuator

Benefits

- Designed and tested under demanding conditions
- Reliable and cost-effective
- Reduced overall set time
- Virtually maintenance-free

Features

- Compact and robust design, IP66S/69K, wide temperature range and corrosion resistant
- Integrated limit switches, optional absolute or incremental positioning feedback
- Integrated thermal protection

CAHB-20E and -20S

Linear actuator

Benefits

- High productivity
- Reliability and safety
- Save development time
- Cost effectiveness
- Quick time to market (for Smart version)

Features:

- Holding force
- Overload protection
- Corrosion protection and stainless steel tube
- Manual override option
- Enhanced ingress protection and virtually maintenance free

Smart version S features

- Integrated controller with complete motion control
- True absolute position contactless sensor
- Monitoring and onboard diagnostic (force, voltage, temperature)
- I/O and CAN bus SAE J1939 communication

²⁾ **246 + 400** (stroke) **+19** (Rod end Spherical plain bearing with anti rotation tube)= **665**

CAHB-21E and -21S

Linear actuator

Benefits

- High productivity
- Reliability and safety
- Save development time
- Cost effectiveness
- Quick time to market (for Smart version)

Features:

- High holding force
- High speed
- Mechanical overload protection
- Corrosion protection and stainless steel tube
- Manual override option
- Enhanced ingress protection, virtually maintenance free

Smart version S features

- Integrated controller with complete motion control
- True absolute position contactless sensor
- Monitoring and on board diagnostic (force, voltage, temperature)
- I/O and CAN bus SAE J1939 communication

Example for Ordering key, in **red** baseline configuration:

¹⁾ **182 + 50** (stroke) + **12** (Fork head attachment) + **1** (Anti-rotation tube with free spinning front attachment) = **245**

²⁾ **261 + 400** (stroke) + **31** (Rod end Spherical plain bearing with anti rotation tube) = **692**

CAHB-22E and -22S

Linear actuator

Benefits

- High productivity
- Reliability and safety
- Save development time
- Cost effectiveness
- Quick time to market (for Smart version)

Features

- High force
- High speed
- High holding force
- Mechanical overload protection
- Corrosion protection and stainless steel tube
- Manual override option
- Enhanced ingress protection, virtuality maintenance free

Smart version S features

- Integrated controller with complete motion control
- True absolute position contactless sensor
- Monitoring and onboard diagnostic (force, voltage, temperature)
- I/O and CAN bus SAE J1939 communication

Cable reference standard: UL758, UL1581 & CSA C22.2 No. 210

Absolut analog position output

Input voltage: 10~55 V DC
 Current consumption: 15 mA max.
 Output analog signal (voltage): 0~5 V DC
 Max current output: 5 mA
 Absolute analog output set up:
 retracted 0,5±0,15 V
 extended 4,5 V to the maximum

Output relation to displacement and resolution

Actuator type	Hall sensor [pulses/mm]	Potentiometer [Ω /mm]	Absolute analogue position output [V/mm]	Resolution of the absolute analog position output [mm]

Electrical specifications (valid for CAHB-20S, -21S, -22S)

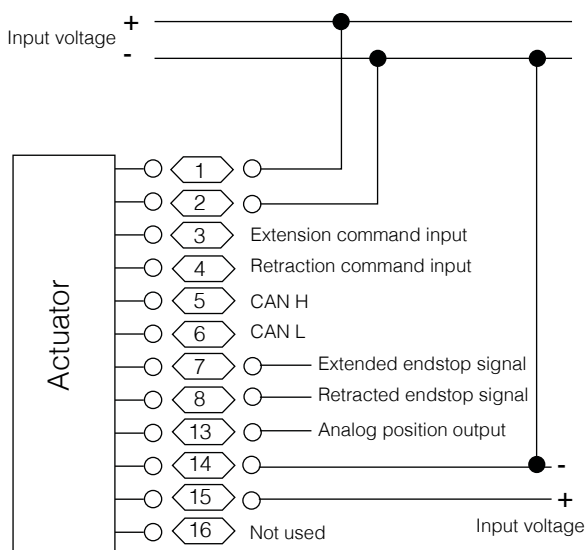

CAN bus + I/O

Ordering key pages 37, 39, 41 (Cable and I/O Option 1: code A and code C)

Wire no.	AWG	Colour	Application
1	14	Red	Power (+) VCC Connect to positive 9 to 16 V DC (12 V version) 18 to 55 V DC (24 – 48 V version)
2	14	Black	Power (-) GND Connect to negative
3	26	Red	Extension command input High: 5 to 55 VDC Low: 0 to 1.19 VDC Max. current consumption: 1mA Delay before movement and stop: 50 ms
4	26	Black	Retraction command input High: 5 to 55 VDC Low: 0 to 1.19 VDC Max. current consumption: 1mA Delay before movement and stop: 50 ms
5	26	Yellow	CAN H (CAN bus J1939)
6	26	Blue	CAN L (CAN bus J1939)
7	26	Grey	End stop signal (Digital output, open collector) Normal (L): High-Z Extended (H): V power - 1.8 V Max. current consumption: 10 mA
8	26	Orange	End stop signal (Digital output, open collector) Normal (L): High-Z Retracted (H): V power - 1.8 V Max. current consumption: 10 mA
13	26	Green	Analog position signal output Retracted position: 0,5±0,02 V Extended position: 5 V or 10 V (default) Max. current output: 15 mA Ripple max: 200 mV Transaction delay: 20 ms Linear feedback 0,5% tan(α)=4,5 / stroke (V/mm), code A or 9,5 / stroke (V/mm), code C Resolution: 10 V / 4 000 / tan(α)
14	26	White	Analog position sensor power (-) GND Common ground with wire No. 2
15	26	Brown	Analog position sensor power (+) For 0~5 V position sensor output ¹⁾ : 8 to 27 V DC For 0~10 V position sensor output ¹⁾ : 13 to 27 V DC Max. current consumption: 15 mA
16	26	Purple	Reserved, not to be connected

¹⁾ Position sensor output to select by the ordering key

Cable reference standard: UL758, UL1581 & CSA C22.2 No. 210

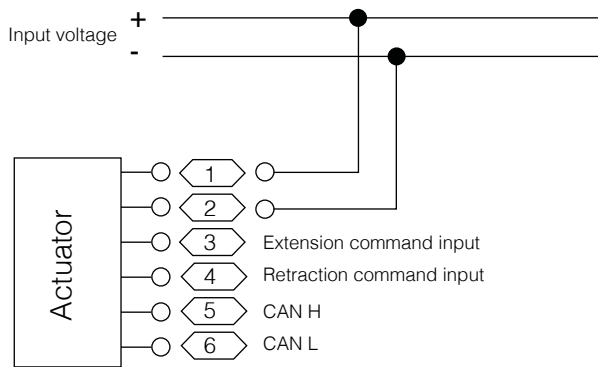

CAN bus + Input

Ordering key pages 37, 39, 41 (Cable and I/O Option 1: code B)

Wire no.	AWG	Colour	Application
1	14	Red	Power (+) VCC Connect to positive 9 to 16 V DC (12 V version) 18 to 55 V DC (24 – 48 V version)
2	14	Black	Power (-) GND Connect to negative
3	26	Red	Extension command input High: 5 to 55 VDC Low: 0 to 1.19 VDC Max. current consumption: 1mA Delay before movement and stop: 50 ms
4	26	Black	Retraction command input High: 5 to 55 VDC Low: 0 to 1.19 VDC Max. current consumption: 1mA Delay before movement and stop: 50 ms
5	26	Yellow	CAN H (CAN bus J1939)
6	26	Blue	CAN L (CAN bus J1939)

Cable reference standard: UL758, UL1581 & CSA C22.2 No. 210

Termination resistance option

Ordering key pages 37, 39, 41 (Bus type Option 2)

Without termination resistor (code C)

With termination resistor (code T)

NOTE.

The CAN bus system of the vehicle request termination resistor.
The CAHB 2xS could be equipped one.

Attachment option (valid for CAHB-20, -21, -22 E and S)

Attachment type

Rod end with hole (refer to ordering key Attachment diameter A - E)

Rear attachment

Front attachment without anti rotation tube

Attachment orientation: "A" to "F"

Front attachment with anti rotation tube

Attachment orientation: "G" to "L"

Hole version	A	B	C	D	E
Hole diameter Ø [mm]	13,1	12,8	12,5	14	12,2
Tolerance	H11	H11	H11	H11	H11

Fork head with hole (refer to ordering key Attachment diameter F - G)

Rear attachment

Front attachment without anti rotation tube

Attachment orientation: "A" to "F"

Front attachment with anti rotation tube

Attachment orientation: "G" to "L"

Hole version	F	G
Hole diameter Ø [mm]	12,2	12,8
Tolerance	H11	H11

Rod end Spherical plain bearing (refer to ordering key Attachment diameter I)

Rear attachment

"I" and "B" have the same rear attachment

Front attachment with anti rotation tube

Attachment orientation: "G" to "L"

Hole version	I (Rear Attachment)	I (front Attachment)
Hole diameter Ø [mm]	12,8	12,7

Attachment orientation (refer to ordering key Attachment orientation)

Orientation A / G Orientation B / H Orientation C / I Orientation D / J Orientation E / K Orientation F / L

Attachment orientation	Description
A	0° without anti rotation tube
B	30° without anti rotation tube
C	60° without anti rotation tube
D	90° without anti rotation tube
E	120° without anti rotation tube
F	150° without anti rotation tube
G	0°: with anti rotation tube and free spinning front attachment
H	30° with anti rotation tube and free spinning front attachment
I	60° with anti rotation tube and free spinning front attachment
J	90° with anti rotation tube and free spinning front attachment
K	120° with anti rotation tube and free spinning front attachment
L	150° with anti rotation tube and free spinning front attachment

Manual override

Release the motor cover (1). Use the slot (2) to rotate the motor shaft (3) in the proper direction

- X Customized

Attachment orientation (Front and rear)

- G 0° (Standard) with Free spinning
- H 30° with Free spinning
- I 60° with Free spinning
- J 90° with Free spinning
- K 120° with Free spinning
- L 150° with Free spinning

Option 1: Cabling and I/O variant

- A Analog I/O (Bus, 2 command input, 2 endstop output, absolute analog position output 0 – 10 V)
- C Analog I/O (Bus, 2 command input, 2 endstop output, absolute analog position output 0 – 5 V)
- B Bus (Bus, 2 command input)

Option 2: BUS Type

- C Standard: CAN without termination resistor
- T CAN with termination resistor

Protection

- T Standard: Chassis connected to negative terminal, built-in thermal protection
- U Chassis connected to negative terminal, reinforced load dump protection²⁾, Built-in thermal protection
- V Chassis not connected, Built-in thermal protection
- W Chassis not connected, reinforced load dump protection²⁾, Built-in thermal protection

Customization

Stroke length, retracted length, cable, connector, front attachment, rear attachment, color, de-rated load

²⁾ For vehicle without centralized load dump protection, option valid only for 12V.

CAHB-30A

Linear actuator

Benefits

- Powered by AC voltage
- Designed and tested for harsh environments
- Reliable and cost-effective
- Reduced development and start-up times
- Virtually maintenance-free

Features

- Optional potentiometer and limit switches
- Self-locking
- Integrated thermal and overload protection
- Robust design, IP65, wide temperature range, corrosion resistant

Technical data

		Unit	CAHB-30A... 1	CAHB-30A... 2
Rated push load		N	1 500	2 300

CAHB-31N

Linear actuator

Benefits

- Powered by AC voltage
- High efficiency
- Designed and tested for harsh environments
- Reliable and cost-effective
- Reduced development and start-up times
- Virtually maintenance-free

Features

- Optional potentiometer and limit switches
- Ball screw with a brake
- Self-locking
- Integrated thermal and overload protection
- Robust design, IP65, wide temperature range, corrosion resistant

CAR, CAP & CAT series

The CAR, CAP, CAT modular design concept makes it easy to interchange critical components such as motors, gears, screws, attachments, etc. Custom-built actuators are easily and cost efficiently built from standard parts. The CAT range flexibility makes it suitable for a high number of applications.

Features

- Compact
- Robust
- Modular
- Lubricated for service life
- High efficiency

Benefits

- Industrial reliable and robust actuator
- Wide range of components
- Right-hand and left-hand version
- Incremental or absolute position feedback option

CAR 22

Linear actuator

Benefits

- Reliable and robust industrial actuator
- Right- and left-hand version
- Maintenance free

Technical data

	Unit	CAR 22
Rated push load	N	1 000 to 1 500
Rated pull load	N	1 000 to 1 500
Speed (full load to no load)	mm/s	13 to 35
Stroke	mm	50 to 300
Retracted length	mm	S+ 205
Voltage	V AC	12 or 24
Power consumption	W	120

CAP 32

Linear actuator

Benefits

- High efficiency ball screw
- Extension tube (stainless steel)
- Protection tube (steel)
- Enhanced corrosion resistance
- Mechanical overload protection (clutch)
- Lubricated for service life
- Robust, designed for tough environment
- No back driving
- Motor with thermal protection

- (a) = cable length
- (b) = cover for brake
- (c) = extended shaft

¹⁾ If S = 400, add 50 mm to retracted length.

CAT 33 and CAP 43A

Linear actuator

Benefits

- Small
- Robust
- Highly efficient
- Lubricated for service life
- Digital encoder feedback

Options shown in red are only available on request. Contact Ewellix for more information on minimum quantities and additional costs.

Spare parts

CAXD 33 limit switch

Limit switches, combined with Ewellix control units, make it possible to set the stroke to any desired length.

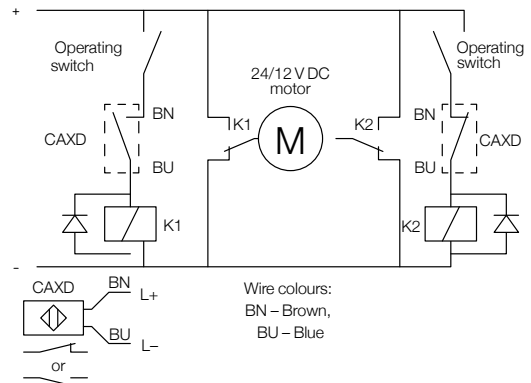

- CAXD 33 – designed for the following actuators:
 - CAT 33
 - CALA 36A
- One CAXD is needed for each limit position
- Use of limit switches reduce the effective stroke by 20 mm for CAT 33 and 25 mm for CALA 36A (retracted position is affected)

Technical data

CAXD 33	
Operating voltage	5 to 30 V DC
Max. current	100 mA DC
Voltage drop	< 5 V
Voltage drop	< 5 V
Electrical function	Normally closed or normally open
Make/fall time	0,3 ms / 0,6 ms
Operating temperature	-20 °C to +50 °C
Ingress protection	IP 67 (sensor element)
Vibration/shock	According to IEC 90947-5-2 (sensor element)
Cable dimensions (L x D)	2 m x 3 mm (PUR)
Cable area	2 x 0,14 mm ²
Housing colour	Black

Connecting diagrams

Important! For DC-supply only

Code	Description
CAXD 33 LIMIT SWITCH, NC	Normally Closed
CAXD 33 LIMIT SWITCH, NO	Normally Open

CAXE limit switch

Limit switches, combined with Ewellix control units, make it possible to set the stroke to any desired length.

- CAXE - designed for the following actuators:
 - CAR 22
 - CAR 32
 - CAR 40
 - CAT 32B
 - CARN 32
- It is recommended to place the limit switch at least 10 mm from the end stop to avoid mechanical failure
- Front attachment G3 must be selected for this option

Dimensional drawing

	A	B	C
CAXE 22	42,5	37	14
CAXE 32/32B	47,5	40	20
CAXE 40	46	46	23

Technical data

CAXE	
Operating voltage	5 to 30 V DC
Max. current	100 mA DC
Protection class	III
Voltage drop	< 5 V
Electrical function	Normally Closed (NC) and Normally Open (NO)
Make/break time	0,3 ms / 0,6 ms
Operating temperature	-20 to +70 °C
Degree of protection	IP 67 (sensor element)
Vibration/shock	According to IEC 60947-5-1 (sensor element)
Cable dimensions (L x D)	2 000 x 3 mm (PUR)
Cable area	3 x 0,14 mm ²

Important! The sensor has no overload protection and no reverse polarity protection.

Feedback for CAT series – Encoder E2

- Can be fitted to all standard motors
- Hall effect, two channels with 90° displacement
- Located on gear housing, see drawing
- 2 pulses/channel and motor revolution
- Supply voltage: 5–24 V DC
- Final resolution according to gear ratio and actuator basic type (see table)

Feedback

	Gear	Pulses at 1mm stroke	Resolution (mm) per pulse
CAT 33	1	16,67	0,06
	2	8,33	0,12
	4	4,17	0,24

CAHM series

The CAHM series consists of spindle lifting actuators with worm gears. They fulfil the highest demands for industrial and other applications. The actuators are available in several different motor versions. CAHM series offers strong (up to 50 000 N), fast and quiet movements with high safety and duty cycle. The actuators include many interface options as hall encoder, end-switch, extended shaft etc.

Features

- Ideal for heavy load applications
- Wide speed/force range
- Robust design

All complete datasheet are available on ewellix.com.

If you request higher force than 12 kN, refer to **High performance actuator catalogue (PUB NUM IL-05001/3-EN-June 2022)**.

Benefits

- Modular
- Robust
- Reliable
- High speed and/or high load
- All metal design

Mounting details

The column must be mounted on a plane and rigid surface by 4 screws M10 (accessory) with a screw in depth of 25 to 35 mm in the column.

Additional attachment options

Optional threads on outer tube section can be configured for additional attachment options. Please contact Ewellix for more details.

- Choice in size and position
- High strength to support attached actuators

Ordering key

The SCU solution offers many more possibilities than those given in the type keys. Please feel free to ask for more functions like “virtual limit switches”, “external limit switches” and so on.

¹⁾ TLT is a 2-motor actuator. If simultaneous run is needed, VCP21-CC... is recommended
²⁾ for VCUx3: insert zero
³⁾ Reduced lift capability: CPMT-1 up to 3 000 N, CPMT-2 up to 4 000 N when using transformer with 7A
⁴⁾ Reduced lift capability: only 8.5A when using transformer with 7A

SCU

Control unit

Benefits

- Compact 6-channel actuator control unit
- Single fault safety
- Overload and over-temperature protection
- Approved for medical applications
- Easy to clean
- Low standby current
- Remote control RS232

COMPACT

Control unit

Benefits

- Synchronized movement of 3 actuators possible
- Up to 4 memory positions (depending on handset)
- Linking possibility of up to 4 control boxes
- Enhanced drive comfort
- Adjustable container – and shelf-stop positions
- Low speed area
- High efficient switch mode power supply (SMPS)
- Low standby power consumption, low field emission

**New medical
solution**

CAMT

Linear actuator for surgical tables and procedure chairs

Benefits

- Play free motion
- Easy installation
- Compact design

Standards

- IEC/UL 60601-1 (Edition 3.1)
- IEC/UL 60601-1-2 (Edition 4)

Technical data

	Unit	CAMT20
Rated push load	N	6 000
Rated pull load	N	6 000
Static load (push/pull) ¹⁾	N	13 200
Safety factor on rated load ^{2) 3)}	–	4
Speed (full load to no load) ⁴⁾	mm/s	5 to 6,5
Stroke	mm	50 to 250
Voltage	VDC	24
Current consumption	A	10
Duty cycle	%	10 (1/9 minutes)
Ambient temperature	°C	+10 to +40
Degree of protection	–	IP20
Noise level (max)	dB	≤ 55
Weight ⁵⁾	Kg	5,8

¹⁾ Compliant with static load according to IEC/UL 60601-2-46

²⁾ Static safety factor to prevent mechanical hazards according to IEC/UL 60601-1

³⁾ Depending on stroke and attachment type, safe work load in push direction is reduced. For details, see diagram **Safety factor load conditions**

⁴⁾ Speed with 24 V DC, speed with V/SCU is higher. For details, see diagram **Load-Speed**

⁵⁾ For stroke 250 mm, without attachment

Product benefits

Play free motion – Extra comfort

Feel the smooth movement introduced by CAMT because all parts are play-free. Unlike common actuators which shake when the load direction changes, CAMT keeps the movement smooth throughout the whole process (↳ diagram 1).

Easy installation – Simplicity

It is easy to install thanks to the new design with extra front and rear attachment with 1 or 2 DOF in motion (↳ fig. 1 and 2).

Compact design – Perfect system integration

The compact design enables a perfect system integration. It can be installed as a single actuator or be combined with other CAMT actuators and a column (e.g. CPMT) to achieve combined motion in any direction (↳ fig. 3).

Fig. 1

Front attachment: play-free

Fig. 2

Rear attachment: play-free

CAMT actuator — Standard actuator —

Fig. 3

Surgical module

¹⁾ Actuator after service life of 10 years in a typical medical procedure equipment application, with the meaning of 60 000 cycles at average load of 3 000 N and average stroke of 100 mm.

Dimensional drawing

Clevis attachment (CAMT20-xxxxx-00L-AA-AFx-000)

1 DOF attachment (CAMT20-xxxxx-00x-BB-AFx-000)

2 DOF attachment (CAMT20-xxxxx-00x-CC-AFx-000)

Retracted length:

L = Stroke (S) + Offset (X) + 50 (long protection tube)

L = Offset (X) + 150 (short protection tube)

* Standard Offset = 60

Motion angles of play front and rear attachments

Performance diagrams

Speed-load diagram

Speed [mm/s]

Current-load diagram

Current consumption [A]

Safety factor load conditions

Push load reduction for static safety factor S=4 (IEC/UL 60601-1)

Load [N]

Safe push and pull load for static safety factor S=2.2 (IEC/UL 60601-2-46)

Load [N]

- Clevis attachment
- 1 DOF attachment, with long protection tube ^{1) 2)}

- 2 DOF attachment, with long protection tube ¹⁾
- Valid for all CAMT configurations

¹⁾ No load reduction with short protection tube

²⁾ No load reduction for 1DOF U-bracket

Rear attachment orientation

Standard bracket (1 DOF and 2 DOF)

U-bracket (1 DOF)

Glossary and symbols

Glossary

A	
Absolute movement	A move referenced from a fixed absolute zero position
Acceleration	The change in velocity as a function of time, going from a lower speed to a higher speed
Accuracy	An absolute measurement defining the difference between expected and actual position
Actuator	An actuator is a device that is responsible for moving or controlling a mechanism or system also known as cylinder, electromechanical cylinder or linear actuator
Ambient temperature	The temperature of the cooling medium, usually air, immediately surrounding the actuator or another device
Angular contact ball bearing	Angular contact ball bearings have raceways in the inner and outer rings that are displaced relative to each other in the direction of the bearing axis. This means that they are designed to accommodate combined loads, i.e. simultaneously acting radial and axial loads.
Anodized	Protective treatment for aluminium that involves subjecting the metal to electrolytic action in a chemical bath, to create a protective film of aluminium oxide with a very smooth finish
Axial load	Load where the force is acting along the axis of actuator (bearing) in any direction
B	
Backlash	The amount of play between a set of moveable parts when changing the direction of travel. Typically seen in drive trains, ball/ lead screws and bearings
Ball bearing	A support device which allows a smooth low friction motion between two surfaces loaded against each other with balls as rolling elements
Ball screw	A screw assembly which uses a ball nut which contains one or more circuits of recirculating steel balls which roll between the nut and the screw
Bearing	A support device which allows a smooth low friction motion between two surfaces loaded against each other
Brushless DC motor	Synchronous motor type that are powered by a DC electric supply through an inverter that produce an AC signal to drive the motor
Bushing	A cylindrical sleeve inserted into a machine part to reduce friction between moving parts
C	
Configurator (product)	Name given to the software that uses the configuration string to build-up a specific actuator from an existing list of components and options
Continuous torque	Is the torque that the motor is able to provide continuously with no limitation in time
Current	The flow of charge through a conductor
Cycle	A complete motion of an actuator from the start position via intermediate positions and back to the start position
Cycle time	Time for one complete motion cycle, from the start of the cycle until the start of the next cycle
Cylinder	A mechanical device which produces a linear force to achieve a reciprocating linear motion. There three common types: pneumatic, hydraulic and electromechanical (or electric). The first two use the power of compressed media (gas or liquid) while the latter uses a mechanical device (screw) to transform the rotational input movement of a motor into a linear one.
D	
Deceleration	The change in velocity as a function of time, going from a higher speed to a lower speed
Duty cycle	The ratio of motor on time and total cycle time within a given cycle of operation
Dynamic load rating	Constant that is used to calculate the service life of a screw drive. The value for the dynamic load rating represents the load under which 90 % of a sufficient large number of identical screw drives can achieve a service life of one million revolutions
E	
Efficiency	Ratio of output power versus input power

Electric cylinder	A self-contained system which converts rotary motion (from a motor) to linear motion
Electromechanical cylinder	A self-contained system which converts rotary motion (from a motor) to linear motion
Electrode	The part of a resistance welding gun that facilitates the high voltage current path to the parts being welded
Equivalent dynamic axial load	Load of constant magnitude over a full motion cycle which has the same influence on the linear unit's service life as the actual fluctuating load
F	
Foot mount	Mounting plates, attached to front and end of a cylinder, to mount the cylinder in parallel to a flat surface
Force	The action of one body on another which tends to change the state of motion of that body. Typically described in terms of magnitude, direction and point of application
Friction	The resistance to motion of two surfaces that are in direct contact
G	
Gear ratio	This relates to the transmission and conversion of movements, linear and rotary speeds, forces and torques in a geared mechanism. The gear ratio (also known as reduction ratio) is the ratio between the input and output variable, e.g. the ratio of input speed to output speed
H	
Hall effect sensor	A magnetically controlled transistor switch controlling DC power. It has no moving parts and theoretically unlimited contact life.
Holding force	Maximum external force that can be applied to a stopped actuator, without causing any linear movement. It is usually given by the holding torque of an electromechanical brake applied on the motor
Humidity (relative)	A ratio that indicates the amount of water vapor in the air. It is usually expressed as a percentage. At any temperature, it is the amount of water vapor in the air, divided by the amount that would be present at saturation
I	
Inertia	Property of an object that resists a change in motion. It is dependent on the mass and shape of the object. The greater an object's mass, the greater its inertia and the more force is necessary to accelerate and decelerate it
IP	Degrees of protection provided by enclosures, according with IEC standard 60529
K	
Keyway	An axially-located groove in the length of a shaft along which a key may be located
L	
Lead	Describes the axial distance a nut is moving on a screw at one full rotation of either the screw or the nut
Lead screw	A screw which uses a threaded screw design (e.g. with trapezoidal shaped thread) with sliding surfaces between the screw and nut
Lifetime	Service life in km that 90 % of a sufficiently large group of apparently identical cylinders can be expected to reach or exceed.
Limit switch	A switch that is actuated by some part of motion of a machine or equipment to alter the electrical circuit associated with it
Linear speed Max. linear speed	The linear speed is the change in position as a function of time. Maximum linear speed, a linear unit or a cylinder can reach without damaging the mechanical system. Limiting factors can be the recirculating system of the balls or rollers, or the heat dissipation when using lead screws, or others. If the motor of the cylinder could turn faster, it needs to be limited
Load	A mass or weight of an application acting on the in axial direction on the push tube

M	
Mass	The quantity of matter that an object contains
Moment	Rotational forces applied to a linear axis, typically expressed as yaw, pitch and roll
Motion profile	A method of describing a move operation in terms of time, position and velocity. Typically, velocity is characterized as a function of time or distance which results in a triangular or trapezoidal profile
Motor	A device which converts electrical energy into mechanical energy
O	
O-ring	A ring of synthetic rubber with a circular cross-section, used as a gasket or seal
Overheating	The heat in a system is mostly dissipated into the surrounding air. Dissipation can be accelerated by various forms of ventilation. In case the dissipation level is lower than the heat generation, overheating takes place
P	
Peak force	The peak force is the maximum force an actuator can push or pull for a short time (peak), without being mechanically damaged or overheating
Peak torque	The peak force is the maximum torque a motor can provide for pull for a short time (peak), without being mechanically damaged or overheating
PLC (programmable logic controller)	An industrial digital computer that is used to control machines and processes by continuously monitoring analog and digital inputs and making decisions based on customer programs
Positioning accuracy	Is the maximum deviation between the actual position and the target position, as defined in VDI/DGQ 3441 norms
Power	How much work is done in a specific amount of time
Proximity sensor	A device for sensing a position of an actuator or application. Proximity sensors supply either a sourcing or sinking signal to a device such as a programmable logic controller
R	
Radial load	Load where the force is acting perpendicular to the axis of the actuator
Repeatability	The ability of a positioning system to return to an exact location during operation (from the same direction with the same load and speed)
Resolver	A feedback device consisting of a stator and rotor that provides position and velocity information to the drive for motor commutation
RMS	The root mean square is the square root of a mean square value
Rod cylinder	A cylinder using a rod attached to its piston to transmit force
Roller screw	A screw assembly which uses a roller nut which contains guided steel rollers which are rotating around their own axis and around the screw (planetary rollers)
S	
Screw assembly	Device which converts rotary motion into linear motion
Service life	The nominal life is expressed by the number of revolutions (or number of operating hours at constant rotary speed) that will be attained or exceeded by 90 % of a sufficiently large number of identical screw drives before the first signs of material fatigue become evident
Servomotor	A motor which is used in closed loop systems where feedback is used to control motor velocity, position or torque
Spur gear	Is a gear or a system of gearing having radial teeth parallel to the axle
Static axial force	Maximum axial force which can be applied on a linear unit only if it is not moving
Stiffness	Is the rigidity of an object, representing its resistance to deformation from an applied force
Stroke length	The linear distance that the push tube of a cylinder can extend or retract

T	
Thermal load	The thermal load describes the force which the actuator can permanently move without overheating. The thermal load is calculated by a formula in respect of changing load conditions over different time phases of a full motion cycle.
Torque	A measure of angular force which produces rotational motion

U	
Units (metric)	A decimal system of weights and measures based on the kilogram and meter

V	
Volt	Difference in electrical potential between two points

W	
Watt	A unit of power or a rate of doing work. The power dissipated by a one-ohm resistor with one ampere of current is one watt
Weight	Force of gravity acting on a body. Determined by multiplying the mass of the object by the acceleration due to gravity

Symbols description

A			
a	m/s ²	Acceleration	The change in velocity as a function of time, going from a lower speed to a higher speed
a _{max}	m/s ²	Max. acceleration	The maximum allowed change in velocity as a function of time from a lower speed to a higher speed. Exceeding this value can cause damages.
C			
C	kN	Dynamic load capacity	Constant that is used to calculate the service life of a ball or roller screw. The value for the dynamic load rating represents the load under which 90 % of a sufficient large number of identical screws can achieve a service life of one million revolutions
D			
D	%	Duty cycle of the cylinder	The ratio of active time at full load and total cycle time within a given cycle of operation
D _{unit}	%	Duty cycle of the linear unit	The ratio of active time and total cycle time within a given cycle of operation
d _{screw}	mm	Screw diameter	Describes the outer diameter of the screw shaft
E			
η	%	Efficiency	Ratio of output power versus input power
η _{lu}	%	Efficiency of the linear unit	Ratio of output power versus input power of the linear unit.
F			
F	N	Force (cylinder) or load (application)	The action of one body on another which tends to change the state of motion of that body. Typically described in terms of magnitude, direction and point of application. The force is related to the capability of the cylinder while the load is related to the mass or weight of an application acting on the axial direction on the push tube.
F _{Amax}	N	Maximum dynamic axial load of the application	Maximum axial push or pull load which is needed to fulfill the specifications of the application.
F _c	N	Continuous force at max speed	The continuous force at max speed describes the force the cylinder can permanently move at maximum allowed linear speed, without overheating.
F _{c0}	N	Continuous force at zero speed	The continuous force at zero speed describes the force the cylinder can permanently hold without overheating and without using a brake.
F _{cont}		Continuous force curve	A curve that represents the continuous force an actuator can permanently move at maximum allowed linear speed, without overheating.
F _{Hold}	kN	Holding force of the brake	Describes the maximum axial load the engaged brake (optional motor brake) can hold if the motor is disabled. This value must not exceed the maximum axial force of the cylinder
F _m	N	Equivalent dynamic axial load	Load of constant magnitude over a full motion cycle which has the same influence on the linear unit's service life as the actual fluctuating load
F _{max}	N	Maximum dynamic axial force	The maximum dynamic axial force describes the maximum force an electric cylinder can deliver during movements without damaging parts. The acceleration/ deceleration of masses need to be considered.
F _{max0}	N	Max. static axial force	Maximum axial force which can be applied on a linear unit only if it is not moving.
F _p	N	Peak force	The peak force describes the maximum force the cylinder can push or pull for a short time, without being mechanically destroyed or by overheating. The length of the peak is depending on the temperature of the system when the peak is initiated.
F _{p0}	N	Peak force at zero speed	The peak force at zero speed is the maximum force the cylinder can hold for a short time without using a brake.
F _{peak}		Peak force curve	A curve that represents the continuous force an actuator can push or pull for a short time, without being mechanically destroyed or by overheating. The length of the peak is depending on the temperature of the system when the peak is initiated.

I				
i	#	Gear reduction		Describes the factor between the number of revolutions of the input of the gear divided by the number of revolutions of the output of the gear. A gear reduction 2 means that the output of the gear (linear unit side) is turning with half speed compared to the input of the gear (motor side). Using a gear reduction enables for using smaller motors with less torque to bring higher force but with lower speed
I	A	Nominal Current		Is the nominal current consumption of the motor
I _{peak}	A	Peak current		Is the maximum current consumption of the motor for a short period of time.
IP		Degree of protection		International protection (also ingress protection) describes the protection of a product with two digits. The first digit describes the protection against dust, the second against water. The higher the value the better the protection.
J				
J	10 ⁻⁴ kgm ²	Inertia		Property of an object that resists a change in motion. It is dependent on the mass and shape of the object. The greater an object's mass, the greater its inertia and the more force is necessary to accelerate and decelerate. As an electric cylinder is available in different lengths, the inertia is typically given for stroke 0, followed by an inertia indication ΔJ for each additional 100 mm.
J _{brake}	10 ⁻⁴ kgm ²	Inertia of the brake		Property of an object that resists a change in motion. It is dependent on the mass and shape of the object. The greater an object's mass, the greater its inertia and the more force is necessary to accelerate and decelerate. As the brake is typically an option, this value has to be added to the Inertia of the electric cylinder.
J _{lu}	10 ⁻⁴ kgm ²	Inertia of the linear unit		Property of an object that resists a change in motion. It is dependent on the mass and shape of the object. The greater an object's mass, the greater its inertia and the more force is necessary to accelerate and decelerate. As the linear unit is available in different lengths, the inertia is typically given for stroke 0, followed by an inertia indication ΔJ for each additional 100 mm.
L				
L _{10 dist}	km	Lifetime distance		Service life in km that 90 % of a sufficiently large group of apparently identical cylinders can be expected to reach or exceed.
M				
m	kg	Weight		Force of gravity acting on a body. Determined by multiplying the mass of the object by the acceleration due to gravity
Δm	kg	Weight difference		As electric cylinders are available in different lengths, the weight is typically given for stroke 0, followed by a weight indication Δm for each additional 100 mm.
m _{arot0}	kg	Weight of the anti-rotation device		The weight of the optional anti-rotation device has to be added to the weight of the cylinder.
m _{brake}	kg	Weight of the brake		The weight of the optional brake has to be added to the weight of the cylinder
m _{lu}	kg	Weight of the linear unit		As the linear unit is available in different lengths, the weight is typically given for stroke 0, followed by a weight indication Δm for each additional 100 mm.
M	Nm	Torque		A measure of angular force applied to a linear axis to produce rotational motion
M _{Ac}	Nm	Required continuous torque		A measure of continuous angular force (torque) a motor has to deliver without overheating
M _{Amax}	Nm	Required maximum torque of the motor		Maximum angular force (torque) of a motor which is required that the cylinder is able to push or pull the maximum load of the application
M _{max}	Nm	Maximum torque		The maximum torque is the upper limitation of the torque. Exceeding this value can cause damages of related parts.
N				
n _{cycles}	#	Number of cycles		The number of motion cycles a cylinder has to have without damage during the expected life of the application
n _{max}	1/min	Max. rotational speed		Describes the maximum allowed number of full rotations of an axis. Exceeding this value can cause damages.

P				
P	W	Nominal Power	Nominal power of the motor, given by multiplying the nominal voltage and the nominal current	
p_{screw}	mm	Screw lead	Describes the axial distance a nut is moving on a screw at one full rotation of either the screw or the nut	
R				
R	Ω	Resistance	The opposition to the flow of charge through a conductor	
S				
s	mm	Stroke	The linear distance that the push tube of a cylinder can extend or retract	
s_0	mm	Internal over stroke	Additional stroke which is not part of the specified stroke length of the cylinder. It is used to prevent the screw nut touching the mechanical end stops when moving over the full specified stroke.	
s_{backlash}	mm	Backlash	Axial play that the cylinder push tube has without turning the screw. It's equivalent with the mechanical axial play of the inner parts of the cylinder.	
s_{cycle}	m	Distance travelled per motion cycle	Travelled distance of a push tube for a full motion cycle, from the start to the next start in both directions.	
s_{max}	mm	Maximum stroke	The maximum stroke describes the mechanical limitation which a cylinder can extend or retract. Limiting factors are side loads (buckling), speed (wobbling of the screw inside), limitations in the manufacturing process and others	
T				
t	s	Time	Time in seconds which is needed for a certain activity.	
t_{cycle}	s	Cycle time	Time for one complete motion cycle, from the start of the cycle until the start of the next cycle	
t_L	h	Required lifetime in hours	The lifetime of a cylinder in hours which is required to serve an application without damage during the expected life of the application.	
T	Nm	Torque	A measure of angular force applied to a linear axis to produce rotational motion	
T_{ambient}	$^{\circ}\text{C}$	Ambient temperature	Temperature of the environment around the object	
U				
U	V	Nominal voltage	Is the supply voltage required by the electric motor	
V				
v	m/s	Linear speed	The linear speed is the change in position as a function of time.	
v_{max}	mm/s	Max. linear speed	Maximum linear speed, a linear unit or a cylinder can reach without damaging the mechanical system. Limiting factors can be the recirculating system of the balls or rollers, or the heat dissipation when using lead screws, or others. If the motor of the cylinder could turn faster, it needs to be limited	
v_{min}	mm/s	Min. linear speed	Minimum linear speed of a LEMC-A cylinder equipped with asynchronous motors that can be adjusted through the integrated frequency inverter
